SCHEDULE OF DUoS TARIFFS16

ENC Distribution Use of System Charges for GSP _A, Eastern.....	17
ENC Distribution Use of System Charges for GSP _B, East Midlands	21
ENC Distribution Use of System Charges for GSP _C, London.....	25
ENC Distribution Use of System Charges for GSP _D, North Wales	29
ENC Distribution Use of System Charges for GSP _E, West Midlands	33
ENC Distribution Use of System Charges for GSP _F, North East	37
ENC Distribution Use of System Charges for GSP _G, North West.....	41
ENC Distribution Use of System Charges for GSP _H, Southern	45
ENC Distribution Use of System Charges for GSP _J, South East	49
ENC Distribution Use of System Charges for GSP _K, South Wales	53
ENC Distribution Use of System Charges for GSP _L, South West	57
ENC Distribution Use of System Charges for GSP _M, Yorkshire	61
ENC Distribution Use of System Charges for GSP _N, South Scotland.	65
ENC Distribution Use of System Charges for GSP _P, North Scotland	69

PART THREE73

LOSS ADJUSTMENT FACTORS73

GSP _A - EPN Eastern, Loss Adjustment Factors	73
GSP _B – CNE East Midlands, Loss Adjustment Factors.....	73
GSP _C – LPN London, Loss Adjustment Factors	74
GSP _D – ENW North Wales, Loss Adjustment Factors	74
GSP _E – CNW West Midlands, Loss Adjustment Factors.....	75
GSP _F – CE NEDL North East, Loss Adjustment Factors.....	75
GSP _G – ENW North West, Loss Adjustment Factors	76
GSP _H – SSE Southern, Loss Adjustment Factors.....	76
GSP _J – SPN South East, Loss Adjustment Factors.....	77
GSP _K – WPD South Wales, Loss Adjustment Factors.....	77
GSP _L – WPD South West, Loss Adjustment Factors	78
GSP _M – CE YEDL Yorkshire, Loss Adjustment Factors	78
GSP _N – SP South Scotland, Loss Adjustment Factors	79
GSP _P – SSE North Scotland, Loss Adjustment Factors.....	79

1.0 INTRODUCTION

This notice has been prepared in order to discharge the obligation of The Electricity Network Company Limited (ENC), hereafter referred to as "ENC", under Standard Licence Condition 14 of our Distribution Licence. It contains information on our tariffs for Demand Use of System, Generation Use of System and Embedded Networks. It also contains information on charging principles and our Loss Adjustment Factors.

If you have any questions about this notice please contact us at the address shown below:

Customer Services
GTC
Energy House

Changes to this statement

Charges shown are current at the time of publication. The licence requires that the terms and charges contained in this Schedule 1 are reviewed at least once each year. Changes to these charges will be subject to the provisions of the relevant agreement for use of system. The Company shall give 30 days notice of any changes to the charges in this Schedule 1.

PART ONE

2. TARIFF APPLICATION AND CHARGING DEFINITIONS

Billing and Payment by Settlement Class (Supercustomer)

2.1 The Supercustomer approach to Non-Half Hourly (NHH) Use of System (DUoS) billing makes use of the way that Suppliers' energy settlements are calculated. Supercustomer tariffs are generally billed through two main charging components: fixed charges and unit charges. The fixed charge is applied to each Metering Point Administration Number (MPAN) registered to a Supplier.

The charges are based on the following tariff components:

- A fixed charge in pence/per MPAN/day; and
- Unit charges in pence/kilowatt hour (kWh), based on the active import registers as provided by the metering system on site. More than one kWh charge will be applied to those tariffs that are classed as multi-rate.

2.2 Invoices are calculated on a periodic basis and sent to each supplier, for whom ENC is conveying supplies of electricity through its distribution system. The tariffs applied are determined by the combination of the Line Loss Factor Class (LLFC), Profile Class (PC) and Standard Settlement Configuration (SSC) registered to the MPAN, and the units consumed within the time periods specified in this notice. All tariffs are assigned at the sole discretion of ENC. The charges in this document are shown exclusive of VAT. Invoices take account of previous reconciliation runs and include VAT.

2.3. Reconciliation is the process that ensures the cash positions of suppliers and ENC are continually corrected to reflect later and more accurate consumption figures.

2.4. Tables relating to NHH Supercustomer billed tariffs are shown for each GSP Group in Part 2 of this statement.

2.5. Unless otherwise stated, where an MPAN has an invalid settlement combination, the 'Domestic Unrestricted' tariff for the relevant GSP Group will be applied as default until the invalid combination is corrected.

Site-Specific Billing and Payment

2.6. These charges apply to exit points where Half Hourly (HH) metering is installed. Invoices for HH metered sites may include the following elements:

- A fixed charge in pence/per MPAN/day;
- A capacity charge in pence/per kVA/day, for agreed Maximum Import Capacity (MIC);
- An Excess Capacity Charge, if a site exceeds its MIC;
- Unit charges in pence/per kWh for conveying electricity over the system; and
- An excess reactive power charge.

2.7. Tables that relate to site-specific tariffs are shown for each GSP Group in Part 2 of this statement.

Extra High Voltage (EHV) Supplies

- 2.8. EHV Connections are allocated site specific DUoS tariffs. These are defined as any of the following:
- 2.8.1. Distribution Systems connected to assets on the Licensee's Distribution System at a voltage level of 22 kilovolts or more;
 - 2.8.2. Premises connected to assets on the Licensee's Distribution System at a voltage level of 22 kilovolts or more.

Unmetered Supplies

- 2.9. These charges are available in respect of supplies of electricity to premises or unlicensed distribution systems which ENC has agreed, subject to conditions, to dispense with metering. In line with The Electricity (Unmetered Supply) Regulations (SI 2001 No.3263), we may only consider providing an unmetered supply where:
- 2.9.1. there is a known, predictable load which is either continuous or controlled in a manner approved by ENC, and
 - 2.9.2. the electrical load is less than 500W or it is otherwise financially or technically impractical to install meters or carry out meter reading.
- 2.10. Supplies where consumption is dependent on other factors, temperature for example, or where the load could be easily increased without the knowledge of ENC, will not normally be allowed to be connected without a meter.
- 2.11. The privilege of being connected without a meter is conditional on the customer providing and maintaining an accurate, detailed and auditable inventory in a form agreed with ENC.

Capacity Charges (Demand Only)

Chargeable Capacity

- 2.12. The standard charge will be a site's Maximum Import Capacity (MIC) multiplied by a pence per kVA per day rate.
- 2.13. For each billing period the chargeable capacity is the highest of either the MIC or the actual capacity taken.

Maximum Import Capacity (MIC)

- 2.14. The MIC will be charged in pence per kVA per day on a site basis.
- 2.15. The level of MIC will be agreed at the time of connection or when an increase has been approved. Following such an agreement (be it at the time of connection or an increase) no reduction in MIC will be allowed for a period of one year.

- 2.16. Reductions to the MIC may only be permitted once in a 12 month period and no retrospective changes will be allowed. Where MIC is reduced the new lower level will be agreed with reference to the level of the customers' maximum demand. It should be noted that where a new lower level is agreed, the original capacity may not be available in the future without the need for network reinforcement and associated cost.
- 2.17. For embedded networks, if capacity ramping has been agreed with ENC, the phasing profile will apply instead of the above rules. Where a phasing of capacity is agreed this will be captured in the bilateral connection agreement with ENC.

Standby Capacity for Additional Security on Site

- 2.18. Where standby capacity charges are applied, the charge will be set at the same rate as that applied to the normal MIC.

Exceeded Capacity

- 2.19. Where a customer takes additional capacity over and above the MIC without authorisation, the excess will be classed as exceeded capacity. The exceeded portion of the capacity will be charged at the same p per kVA per day rate, based on the difference between the MIC and the actual capacity. This will be charged for the duration of the month in which the breach occurs.

Minimum Capacity Levels

- 2.20. There is no Minimum Capacity threshold.

Import Reactive Power Charge

- 2.21. The Excess Reactive Power charge applies when a site's reactive power (measured in kVArh) exceeds 33% of total active power (measured in kWh) in any half-hourly period. This threshold is equivalent to an average power factor of 0.95 during the period. Any reactive units in excess of the 33% threshold are charged at the rate appropriate to the particular tariff.

- 2.22. Power Factor is calculated as follows:

$$\text{Cos } \theta = \text{Power Factor}$$

2.23. The chargeable Reactive Power is calculated as follows:

$$\text{Chargeable kVArh} = \max \left(\max(\text{RI}, \text{RE}) - \left(\sqrt{\left(\frac{1}{0.95^2} - 1 \right)} \times \text{AI} \right), 0 \right)$$

2.24 Where:

AI = Active Import in kWh

RI = Reactive Import in kVArh

RE = Reactive Export in kVArh

2.25. This calculation is completed for every half hour and the values summated over the billing period.

2.26. Only kVArh Import and kVArh Export values occurring at times of kWh Import are used.

2.27. The square root calculation will be to two decimal places.

Generation Billing and Payment by Settlement Class

2.28. UoS charges for NHH Low Voltage (LV) generation tariffs will be billed via Supercustomer.

2.29. The structure of NHH generation charges will be as follows:

- A fixed charge in pence/per MPAN/day; and
- Unit charges in pence/per kWh for transport of electricity over the system.

2.30. Details of our charges for NHH Generation can be found in Part 2 by GSP Group.

Generation Site Specific Billing and Payment

2.31. Use of System (UoS) charges for HH Low Voltage (LV) and High Voltage (HV) generation tariffs will be billed via the HH billing systems.

2.32. The structure of HH generation charges will be as follows:

- A fixed charge in pence/per MPAN/day;
- Unit charges in pence/per kWh for transport of electricity over the system; and
- An excess reactive power charge.

2.33. Details of our charges for HH Generation can be found in Part 2 under each GSP Group.

Generation Reactive Power Charge

- 2.34. The Excess Reactive Power charge applies when a site's reactive power (measured in kVArh) exceeds 33% of total active power (measured in kWh) in any half-hourly period. This threshold is equivalent to an average power factor of 0.95 during the period. Any reactive units in excess of the 33% threshold are charged for at the rate appropriate to the particular tariff.
- 2.35. Power Factor is calculated as follows:

$\cos \theta = \text{Power Factor}$

- 2.36. The chargeable reactive power is calculated as follows:

$$\text{Chargeable kVArh} = \max \left(\max(\text{RI}, \text{RE}) - \left(\sqrt{\left(\frac{1}{0.95^2} - 1 \right)} \times \text{AE} \right), 0 \right)$$

- 2.37. Where:

AE = Active Export in kWh

RI = Reactive Import in kVArh

RE = Reactive Export in kVArh

- 2.38. This calculation is completed for every half hour and the values summated over the billing period.
- 2.39. Only kVArh Import and kVArh Export values occurring at times of kWh Export are used.
- 2.40. The square root calculation will be to two decimal places.

Provision of Billing Data

- 2.41. Where Half Hourly metering data is required for Use of System charging and this is not provided through settlements processes, such metering data shall be provided by the user of the system to ENC in respect of each calendar month and within five working days of the end of that calendar month. The metering data shall identify the amount consumed in each half hour of each day in the charging period and shall separately identify active and reactive import and export. Metering data provided to the company shall be consistent with that received through the metering equipment installed. Metering data shall be provided in an electronic format specified by ENC from time to time and in the absence of such specification, metering data shall be provided in a comma separated text file in the format of D0036 MRA data flow (and as agreed with ENC). This can be e-mailed to encadmin@gtc-uk.co.uk
- 2.42. ENC requires reactive consumption or production to be provided for all Measurement Class C (mandatory half hourly metered) sites. ENC reserves the right to levy a charge on suppliers who fail to provide such reactive data after a reasonable period of notice. In order to estimate missing reactive consumption, a Power Factor of 0.9 lag will be applied to the active consumption in any half hour.

3. SCHEDULE OF DEMAND TARIFFS

Tariffs for Profile Classes 1& 2

- 3.1. Suppliers who wish to supply electricity to customers with Non-Half Hourly metered (Measurement Class A) MPANs on Profile Classes 1 or 2 may adopt one of the charging structures set out in Part 2 for the relevant GSP Group. Tariffs for Profile Classes 1 and 2 are applicable to domestic premises only where the capacity required is no greater than 24kVA.
- 3.2. Valid combinations for these Line Loss Factor Classes (LLFCs) are detailed in Market Domain Data (MDD). Unit time periods are as specified in the relevant SSC.

Tariffs for Profile Classes 3 & 4

- 3.3. Suppliers who wish to supply electricity to customers with non-Half Hourly metered (Measurement Class A) MPANs on Profile Classes 3 or 4 may adopt one of the charging structures set out in Part 2 for the relevant GSP Group. Tariffs for Profile Classes 3 and 4 are generally only available for supplies where the capacity required is no greater than 50kVA.
- 3.4. Valid combinations for these tariffs are detailed in MDD. Unit time periods are as specified in the relevant SSC.

Tariffs for Profile Classes 5-8

- 3.5. Suppliers who wish to supply electricity to customers with non Half Hourly metered (Measurement Class A) MPANs on Profile Classes 5 to 8 may adopt one of the charging structures set out in Part 2 for the relevant GSP Group. Tariffs for Profile Classes 5 to 8 are only available for supplies where the capacity required is no greater than 100kVA.
- 3.6. Unrestricted tariffs for Profile Classes 5 to 8 are to be unsupported from 01 October 2010. Suppliers must ensure they take appropriate steps to ensure valid combinations and appropriate metering is in place. Where a supplier fails to take appropriate actions to migrate to supported tariffs and customers continue to be on an unrestricted combination, ENC will apply the applicable day/unrestricted charge across all time periods.
- 3.7. Valid combinations for these tariffs are detailed in MDD.

Tariffs for Half Hourly Metered LV and HV

- 3.8. Suppliers who wish to supply electricity to customers whose supplies are Half Hourly metered (Measurement Classes C or E) may adopt one of the charging structures shown below, dependent upon the voltage at which the customer is connected to the system. The Use of System charge will be the sum of the charges for HH set out in Part 2 in the table for the relevant GSP Group.

Tariffs for Half Hourly Metered EHV

- 3.9. Sites connected at EHV will incur Site Specific Charges. As of 01 October 2010, ENC has no MPANs connected at EHV.

Unmetered Non Half Hourly and Pseudo Half Hourly Tariffs

- 3.10. Suppliers who wish to supply electricity to customers where a non Half Hourly unmetered (Measurement Class B) or pseudo Half Hourly (Measurement Class D) supply is provided may adopt one of the charging structures in Part 2 for the relevant GSP Group.

Use of System Charges Out of Area

- 3.11. ENC does not have a distribution service area.

Preserved/Additional LLFC Classes

- 3.12. ENC has no preserved LLFCs at 1 October 2010.

4. GENERATION TARIFFS

- 4.1. Suppliers who wish to purchase electricity from distributed generators with NHH metered (M Class B) MPANs or with HH metered (M Class D) MPANs may, adopt the charge structure depending upon the metered voltage found in Part 2 for the relevant GSP Group.
- 4.2. The tariffs that apply to sites metered at HV or LV are found in Part 2 for the relevant GSP Group. Sites metered at EHV will incur Site Specific Charges which will be applied using ENC's EHV Charging Methodology.
- 4.3 As of 01 October 2010, ENC has no EHV Connections.

5. LICENSED DISTRIBUTOR NETWORK OPERATOR (LDNO) TARIFFS

LDNO tariffs have been calculated for use by LDNOs only to reflect the displacement of the upstream DNO distribution costs and are not available for DNO to DNO inter-connectors, connections to other offshore transmission networks or other similar connections. Use of system charges for inter-connectors, offshore transmission connections or other similar connections will be based on the appropriate standard tariffs.

- 5.1. The tariff for embedded network operators will mirror the structure of the all-the-way-tariff to the customer and is dependent upon the voltage of connection, either LV or HV. The tariff will comprise of the same elements as those in tariffs applied by the relevant licensed distributor to the same class of customer and operating within its distribution services area.

LDNO LV Connections to ENC Network; Low Voltage Tariffs for Profile Classes 1 to 8

- 5.2. Tariffs that apply to LDNOs whose connection to the distribution network is at LV are found in Part 2 for the relevant GSP Group.

LDNO LV Connections to DNO Network: Low Voltage Tariffs for HH Metered Customers

- 5.3. Tariffs that apply to LDNOs whose connection to the distribution network is at LV

LDNO HV Connections to DNO Network: Low Voltage Tariffs for Profile Classes 1 to 8

- 5.4. Tariffs that apply to LDNOs whose connection to the distribution network is at HV are found in Part 2 for the relevant GSP Group.

LDNO HV Connections to DNO Network: High Voltage Tariffs for HH Metered Customers

- 5.5. Tariffs that apply to LDNOs whose connection to the distribution network is at HV are found in Part 2 for the relevant GSP Group.

6. SYSTEM LOSS ADJUSTMENT FACTORS

Role of Loss Adjustment Factors in the Supply of Electricity

- 6.1. Authorised Electricity Operators providing a supply of electricity from any entry point into ENC's electricity distribution network, including a generator entry point embedded in the network or a supply point from the transmission network, will be required to demonstrate that at all times the amount of electricity entering the network is sufficient to meet the supply in accordance with the following adjustment factors.
- 6.2. Tables for each GSP Group are found in Part 3, which indicate the factor by which supplies taken from the Grid Supply Point must exceed the take at the exit point from the network, varying according to the time of day, the season and the voltage of connection.
- 6.3. The treatment of electrical losses on the DNO distribution system is regulated in accordance with the price control set out in the Licence. Suppliers should refer to the Table of Loss Adjustment Factors to calculate the amount of electricity that they must provide. The same Loss Adjustment Factors (LAFs) are reflected in the settlement system.
- 6.4. ENC replicates the LAFs published by the relevant distributor in whose distribution services area ENC's network connects. BSCP128 determines the principles with which DNOs must comply when setting LLFCs.

Site Specific Loss Adjustment Factors

- 6.5. In accordance with BSCP128, where a site is metered at EHV, account will be taken of the individual characteristics and location with regard to the real electrical flows on the network, including any losses on the connection into ENC's electricity distribution network.
- 6.6. As of 01 October 2010, ENC has no Site Specific Loss Adjustment Factors.
- 6.7. The Elexon website contains the loss factors in standard industry data format (D0265). Details can be found within the Market data – Static data area at www.Elexon.co.uk

7. ELECTRICITY DISTRIBUTION REBATES

- 7.1 ENC has neither given nor announced any distribution system rebates to authorised electricity operators in the 12 months preceding the date of publication of this revision of the statement.

8. ACCOUNTING AND ADMINISTRATION SERVICES

Administration Charge

Currently, ENC makes no administration charges to cover the associated credit control, administration, invoicing and collection costs incurred where a User has failed to settle a DUoS invoice or notify ENC of a bona fide dispute.

Interest charges for late payment will be made in accordance with clause 23.3 or 46.3 (as appropriate) of the Distribution Connection and Use of System Agreement (DCUSA).

9. CHARGES FOR ELECTRICAL PLANT PROVIDED ANCILLARY TO THE GRANT OF USE OF SYSTEM

Currently ENC offers no services under this category.

10. GLOSSARY OF TERMS

10.1. The following definitions are included to aid understanding:

Term	Definition
Customer	A person to whom a User proposes to supply, or for the time being supplies, electricity through an exit point, or from whom a user, or any relevant exempt supplier, is entitled to recover charges, compensation or an account of profits in respect of electricity supplied through an exit point
Distribution Licence	The Electricity Distribution Licence granted or treated as granted pursuant to section 6(1) of the Act
Distribution Services Area	Has, in respect of each company, the meaning given to that term in paragraph 5(b) of Condition 2 of the Distribution Licence.
Distribution Connection Use of System Agreement (DCUSA)	A multi party contract between Licensed Distribution Network Operators, suppliers and generators within Great Britain.
Extra High Voltage (EHV)	Voltages of 22kV and above.
Entry Point	A boundary point at which electricity is exported onto a distribution system from a connected installation or from another distribution system, not forming part of the total system (boundary point and total system having the meaning given to those terms in the BSC).

Exit Point	A boundary point at which electricity is imported from a distribution system to a connected Installation or to another distribution system, not forming part of the total system (boundary point and total system having the meaning given to those terms in the BSC).
High Voltage (HV)	Nominal voltages of at least 1kV and less than 22kV.
High Voltage Sub Station	HV Sub applies to customers connected to the licensee's distribution system at a voltage of at least 1kV and less than 22kV at a substation with a primary voltage (the highest operating voltage present at the substation) of at least 22kV and less than 66kV, where the current transformer used for the customer's settlement metering or for metering used in the calculation of the customer's use of system charges or credits is located at the substation.
Low Voltage (LV)	Nominal voltages below 1kV.
Low Voltage Sub-Station	LV Sub applies to customers connected to the licensee's distribution system at a voltage of less than 1kV at a substation with a primary voltage (the highest operating voltage present at the substation) of at least 1kV and less than 22kV, where the current transformer used for the customer's settlement metering is located at the substation.
Licensed Distributor Network Operator	Licensed distribution network operator. This refers to an independent distribution network operator (IDNO) or to a distribution network operator (DNO) operating embedded distribution network outside its distribution service area
Market Domain Data (MDD)	Market Domain Data is the central repository of reference data used by Suppliers, Supplier Agents and Licensed Distribution System Operators (LDSOs) in the retail electricity market. It is essential to the operation of Supplier Volume Allocation (SVA) Trading Arrangements.
Measurement Class	The Measurement Class of a Metering System e.g. above 100kW, below 100kW, unmetered.
Ofgem	The Office of Gas and Electricity Markets - Ofgem is governed by GEMA and is responsible for the regulation of the distribution companies
Use of System Charges	Charges for demand and generation customers which are connected to and utilising the distribution network.
User	Is a supplier, generator or Licensed Distribution Network Operator.

PART TWO

SCHEDULE OF DUoS TARIFFS

ENC's tariffs are broken down for each GSP group and are shown on the following pages. For each GSP Group separate tables are produced for:

- NHH Demand Tariffs

- HH Demand Tariffs

- Generation Tariffs

- LDNO Tariffs

 - Demand and Generation Connections at LV

 - Demand and Generation Connections at HV

ENC Distribution Use of System Charges for GSP _A, Eastern

Effective from 1st March 2011

Tariff Code	Non Half-Hourly Tariff Description	LLFC	PC	Fixed Charge 1 (p/MPAN/day)	Day or unrestricted Unit (p/kWh)	Night Unit Charge 1 (p/kWh)
Domestic Tariffs PC 1-2						
A100	Domestic Unrestricted	100, 102, 105, 400,900	01	3.93	1.195	
A101	Domestic Unrestricted	101, 103, 106, 401, 901	01	3.93	1.195	
A106	Domestic Unrestricted	100, 102, 105, 400,900	01	3.93	1.195	
A106	Domestic Unrestricted	101, 103, 106, 401, 901	01	3.93	1.195	
A102	Domestic Two Rate	100, 102, 105, 400,900	02	3.93	1.471	0.212
A103	Domestic Two Rate	101, 103, 106, 401, 901	02	3.93	1.471	0.212
A104	Domestic E10	100, 102, 105, 400,900	02	3.93	1.471	0.212
A105	Domestic E10	101, 103, 106, 401, 901	02	3.93	1.471	0.212
Non-Domestic Tariffs PC 3-4						
A200	Non Domestic Unrestricted	100, 102, 105, 400,900	03	4.19	1.075	
A201	Non Domestic Unrestricted	101, 103, 106, 401, 901	03	4.19	1.075	
A202	Non Domestic Two Rate	100, 102, 105, 400,900	04	4.19	1.179	0.215
A203	Non Domestic Two Rate	101, 103, 106, 401, 901	04	4.19	1.179	0.215
Non-Domestic Tariffs PC 5-8						
A212	Non Domestic LV Two Rate 5-8	100, 102, 105, 400,900	5-8	31.71	0.967	0.147
A213	Non Domestic LV Two Rate 5-8	101, 103, 106, 401, 901	5-8	31.71	0.967	0.147
A216	LV Sub Medium Non Domestic 5-8	540, 541	5-8			
Unmetered NHH						
A400	Unmetered Supply NHH Continuous (Type A)	405,406, 407, 408, 902	08	0.00	1.242	
A401	Unmetered Supply NHH Dusk to Dawn (Type B)	405,406, 407, 408, 902	01	0.00	1.242	
A402	Unmetered Supply NHH Half night - pre dawn (Type C)	405,406, 407, 408, 902	01	0.00	1.242	
A403	Unmetered Supply NHH Dawn to Dusk (Type D)	405,406, 407, 408, 902	01	0.00	1.242	
Notes:	Unit time periods are as specified in the SSC					
	Shaded tariffs are unsupported by ENC					

Tariff Code	Half-Hourly Tariff Description	LLFC	Fixed Charge (p/MPAN/day)	Capacity Charge (p/kVA/day)	Excess capacity charge (p/kVA/day)	Red or unrestricted Unit Charge (p/kWh)	Amber Unit Charge (p/kWh)	Green Unit Charge (p/kWh)	Excess Reactive Power Charge (p/kVArh)
